Please amend the claims as follows:

## **CLAIMS**

1. (Amended) A bucket carrier made from rubber sheet material comprising: 1 a central strip with a left end and a right end; 2 a left front band portion with a left front band upper edge integral with 3 the left end of the central strip, a left front band lower edge, a left front band free end, 4 and a left rear band portion integral with the central strip and the left front band 5 portion; 6 a right front band portion with a right front band upper edge integral with 7 the right end of the central strip, a right front band lower edge, a right front band free 8 end, and a right rear band portion integral with the central strip and the right front 9 10 band portion; a permanent and non releasable left joint connecting the left front band 11 free end to the left rear band portion to form a left bucket band with a frustoconical 12 left bucket receiving passage; and 13 a permanent and non releasable right joint connecting the right band 14 free end to the right rear portion to form a right bucket band with a frustoconical right 15

2. (Original) A bucket carrier, as set forth in claim 1, including a left upper tongue integral with a left bucket band upper edge, and a right upper tongue integral

- 3 with a right bucket band upper edge.
- 3. (Original) A bucket carrier, as set forth in claim 1, including a left lower
- tongue integral with a left bucket band lower edge, and a right lower tongue integral
- 3 with a right bucket band lower edge.
- 4. (Original) A bucket carrier, as set forth in claim 1, including a first anti-
- abrasion flap integral with the left bucket band lower edge, and a second anti-
- abrasion flap integral with the right bucket band lower edge.
- 1 5. (Amended) A bucket carrier cut from a flat sheet flexible resilient material
- 2 comprising:
- a central strip with a left end and a right end;
- a left side front band portion with a left arcuate upper edge integral with
- 5 the left end of the central strip, a left arcuate lower edge, a left side front band front
- band free end, and a left side rear band portion integral with the central strip and the
- 7 left side front band portion;
- a right side front band portion with a right arcuate upper edge integral
- 9 with the right end of the central strip, a right arcuate lower edge, a right side front
- band free end, and a right side rear band portion integral with the central strip and
- the right side front band portion;
- a left side joint connecting the left side free end to the left side rear
- band portion to form a frustoconical left bucket band with a left band vertical height

- that is at least one third the height of buckets to be carried and forms a left bucket receiving passage with a left passage upper diameter that exceeds a left passage lower diameter; and
- a right side joint connecting the right side free end to the right side rear
  band portion to form a frustoconical right bucket band with a right band vertical height
  that is at least one-third the height of buckets to be carried and forms a right bucket
  receiving passage with a right passage upper diameter that exceeds a right passage
  lower diameter.
  - 1 6. (Original) A bucket carrier, as set forth in claim 5, including a left upper
  - tongue integral with the upper edge of the left bucket band and a right upper tongue
  - 3 integral with the upper edge of the right bucket band.
  - 1 7. (Original) A bucket carrier, as set forth in claim 5, including a left lower
  - tongue integral with the left lower edge of the left bucket band, and a right lower
  - 3 tongue integral with the right lower edge of the right bucket band.
  - 1 8. (Original) A bucket carrier, as set forth in claim 5, wherein the left bucket
  - band includes a left side anti-abrasion flap integral with the left arcuate lower edge,
  - and wherein the right bucket band includes right side anti-abrasion flap integral with
  - the right arcuate lower edge.
  - 9. (Amended) A method of making a bucket carrier comprising:

9

10

11

12

13

3

4

5

6

7

8

9

2	cutting a one piece bucket carrier blank from a sheet of rubber material;
3	wrapping a left front band portion and a left rear band portion of the
4	bucket carrier blank around a conical surface;

overlapping a left rear band free end and a left front band free end;

applying an permanent and non releasable adhesive to the left rear

band free end and the left front band free end to form a left band with a left bucket

passage;

wrapping a right front band portion and a right rear band portion of the bucket carrier blank around a conical surface; and

applying an <u>permanent and non releasable</u> adhesive to right rear band free end and a right front band free end to form a right band with a right bucket passage.

- 1 10. (New) A bucket carrier made from rubber sheet material comprising:
  2 a central strip with a left end and a right end;
  - a left front band portion with a left front band upper edge integral with the left end of the central strip, a left front band lower edge, a left front band free end, and a left rear band portion integral with the central strip and the left front band portion;

a right front band portion with a right front band upper edge integral with the right end of the central strip, a right front band lower edge, a right front band free end, and a right rear band portion integral with the central strip and the right front

10	band	portion;
<b>T</b> 0	Dana	poraori,

- a left joint connecting the left front band free end to the left rear band portion to form a left bucket band with a frustoconical left bucket receiving passage;

  a right joint connecting the right band free end to the right rear portion
- to form a right bucket band with a frustoconical right bucket receiving passage;
- a left upper tongue integral with a left bucket band upper edge; and a right upper tongue integral with a right bucket band upper edge.
  - 1 11. (New) A bucket carrier, as set forth in claim 10, including a left lower
  - tongue integral with a left bucket band lower edge, and a right lower tongue integral
  - 3 with a right bucket band lower edge.
  - 1 12. (New) A bucket carrier, as set forth in claim 10, including a first anti-
  - a brasion flap integral with the left bucket band lower edge, and a second anti-
  - abrasion flap integral with the right bucket band lower edge.
